

RUNTIME VALIDATION

Connect BOTIFY to MetaTrader

If the product shows Awaiting first validation or the chart says LICENSE API UNAVAILABLE, MetaTrader has not yet been allowed to contact BOTIFY. Follow this once on each computer or terminal installation.

Add this exact trusted URL

<https://botifyfx.com>

Five steps

1**Open MetaTrader Options**

In MT4 or MT5, choose Tools -> Options from the top menu.

2**Select Expert Advisors**

Open the Expert Advisors tab. In MT5, keep Allow algorithmic trading enabled. In MT4, keep Allow automated trading enabled.

3**Enable WebRequest**

Check Allow WebRequest for listed URL. This permission applies only to addresses you add to the list.

4**Add BOTIFY**

Press the plus sign and enter exactly <https://botifyfx.com>. Use HTTPS, do not add www, a path, spaces, or a trailing slash.

5**Reconnect the product**

Click OK. Remove and reattach the EA or indicator, or restart MetaTrader. BOTIFY rechecks automatically; no manual activation button is needed.

MT5

The toolbar button should show Algo Trading enabled.

MT4

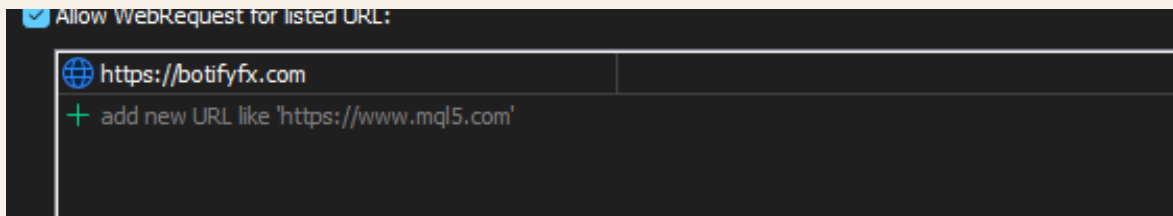

The toolbar button should show AutoTrading enabled.

The license timer starts only after the first successful, signed BOTIFY validation. Whitelisting the URL by itself does not start the purchased term.

VISUAL CHECK

Correct WebRequest setting

The image below shows only the required MT5 WebRequest setting. MT4 uses the same Tools -> Options -> Expert Advisors path and the same trusted URL. Other options are not required by BOTIFY.

Correct: WebRequest is checked and the list contains https://botifyfx.com.

If it is still locked

No runtime contact

Confirm internet access, the exact HTTPS URL, and that the Windows firewall or antivirus is not blocking MetaTrader.

Account mismatch

Attach the file only to the registered MetaTrader login and broker server shown in your BOTIFY account.

Demo / Live mismatch

A Demo license works only on a Demo account. A Live license works only on its registered Real account.

Need help?

Send BOTIFY support the message shown on the chart plus your public license ID. Never send your license key or password.

How to confirm success

Refresh My Account on botifyfx.com. Under the product, Runtime Validation changes to Authorized. For a timed plan, the countdown begins from that first successful activation. New BOTIFY MT5 builds also display the remaining purchased time on the chart. The MT4 steps in this guide are a connection reference; BOTIFY currently delivers protected MT5/EX5 builds.

Security note: BOTIFY never asks you to disable licensing, change your computer clock, share a password, or whitelist an unrelated domain.
